

## TWMOBILE™ MOBILE INSPECTION SYSTEM

TWMobile™ is a complete data collection system designed to assist mobile inspectors, repair/cleaning personnel, engineers, and other mobile workers to immediately scan and record services performed, print professional reports on the job, and automatically upload service data to a home office system for billing and customer access.

### TWMobile Brings Efficiency to Mobile Inspection Workflow by Providing the Following Benefits:

- On-site scanning and reporting that eliminates the manual process of keying handwritten inspection and service reporting forms into your customer service system
- Printing of legible and professional-looking customer reports right at the customer's location
- Transferring of customer service data immediately from the work site to immediately produce invoices
- Use of state-of-the-art mobile inspection technology to gain more sales and give your business a competitive advantage

### TWMobile Mobile Inspection System Features:

- Upload customer and route data before the job begins, so you don't have to be connected to an expensive Wireless Wide Area Network until you're ready to upload your completed service report(s) at the job's conclusion
- Works with any Windows mobile handheld computer to scan at each location with only that location's data
- No computer programming skills required. Service personnel will utilize menus and drop-down screens that are visually intuitive and easy to use
- Uses bar code scanning to easily and accurately identify items to be serviced and/or inspected
- Any authorized person can view customer information via a LAN, WAN, or Internet connection
