

TWPTSERVER™

TWPTServer is an enterprise Smart Printer communications system that allows data uploads to Smart Printers to be controlled by the printers (“Pull”) as opposed to “Pushing” from the server. This eliminates the need for operator intervention or administrative overhead on the server side. Smart Printers can be individually configured to exchange data with PTServer at different times to avoid network overload or conflicts. Other features of TWPTServer include:

- Eliminates print seat licensing
- Read/write database capabilities
- Maintain label formats with effectivity dates/times
- Independent label printing even when a network connection is not available
- Built-in Microsoft SQL database that can be shared with other RACO applications
- Runs under Windows™ using Microsoft standards for maximum longevity and flexibility

Product Suite:

- TWLot™ Lot Traceability / Recall Management System
- TWPLC Printer™
- TWTool™ Tool Crib System
- TWTrack™ Returnable Container Tracking System
- TWWarehouse™ Warehouse Control system
