

TWRFID SERVER™

The TWRFID Server software is designed to provide a flexible interface to RFID controllers, antennas, and interrogators for seamless bridging of data into a company's enterprise systems.

TWRFID Server Features:

- Works with any Class/Generation of RFID tags and readers
- Provides a software development environment for reading tags, interpreting tag data, writing back to tags, encoding tags on RFID printers, and integrating with any host system
- Built-in Microsoft SQL database that can be shared with other RACO applications software
- Runs under Windows using Microsoft standards for maximum longevity and flexibility

RACO services:

- Specialize in data collection systems for the manufacturing and distribution industries
- Provide customized, not custom, data collection solutions that are affordable, easy to use and expandable
- Consulting assistance for traceability and error proofing implementations
- Wireless Data Services
- SIM Provisioning
- Application Configuration
- Product Set-up & Staging
- Operator Training
- Hardware Testing & Configuration
- Remote Device Management
- Support Services

Product Suite:

- TWLot™ Lot Traceability / Recall Management System
