

TWTOOL™ TOOL CRIB INVENTORY MANAGEMENT SYSTEM

The TWTool Tool Crib Inventory Management System is a software solution that is designed to help companies of nearly any size to not only track all of the parts in their tool crib, but also manage the activity of those parts and track when they are being used.

With the TWTool software system, you can easily and efficiently track parts and inventory transactions by when they are received, put away, or picked out of the system, as well as when tools and assets are checked in or checked out. The result is a quicker, more efficient inventory and parts management process.

TWTool Tool Crib Inventory Management System Highlights:

- Features two independent modules: Crib Parts Tracking and Tool Tracking
- Can be linked to any commercial or custom ERP/DRP system on any hardware platform
- Maintains perpetual inventory of all parts so you can check inventory levels at any time
- Set min and max reorder levels on inventory to generate Reorder and Inventory Turns reports
- TWTool™ can run on both the mobile handheld and PC or entirely on a PC
- Runs under Windows using Microsoft software standards for maximum longevity and flexibility

TWTool™ Views/Reports:

- Parts reorder report
- Part usage report
- Inventory turns reports
- Tools checked out by employee or tool ID reports
- Overdue tools report
- Transactions by date, employee, or part number
- Current status of parts or tools
