

TWTRACK™ CONTAINER TRACKING SYSTEM

The TWTrack Container Tracking System is a software solution designed to help companies track and manage returnable containers. TWTrack™ is a complete data collection system, and can be tailored to fit the unique requirements of a company, facility, or user, helping to efficiently manage the expensive cost of returnable containers.

TWTrack Container Tracking System Features:

- Can be linked to any commercial or custom ERP/DRP system on any hardware platform, or run standalone.
- The system can be adjusted easily as business needs change, all without changing the underlying functions of the software.
- Any authorized person can view container status, location, and inventory information within a facility or throughout the corporation, via a LAN, WAN or over the Internet.
- Collects data automatically from scanners, both RFID tags and bar codes, at the receiving and shipping docks or in the yard.
- Runs under Windows using Microsoft standards for maximum longevity and flexibility

TWTrack™ Provides the Following Views/Reports:

- Historical container movement / audit trail
- Container inventory status / locator
- Maintenance history
- Scheduled testing history
