

## TWWAREHOUSE™ WAREHOUSE CONTROL SYSTEM

TWWarehouse is a management software system designed to help companies track the movements of their inventory and increase efficiencies in a distribution operation. By connecting the software to your company database, the system is capable of automatically collecting data from both bar codes and RFID tags to track picking and receiving, returns and moves, inventory count, packing, and more. It can also be used to print shipping and master labels and verify shipments. Best of all, TWWarehouse can be adjusted to suit your ever-changing business needs without changing the underlying functions of the software. The result is a flexible system that grows along with you and your business.

### TWWarehouse Management System Features:

- Can link to any commercial or custom ERP/DRP system on any hardware platform
- Configurable to handle standard or food tracking by lots and/or serial numbers
- Additional fields and functions provided for food spoilage alerts, oldest lot picking enforcement, product grades, and quality statuses
- The system can be enhanced easily as business needs change without changing the underlying software
- Collects data automatically from scanners (both bar codes and RFID tags) and automated carousels (horizontal and vertical) and conveyors
- Runs under Windows™ using Microsoft standards for maximum longevity and flexibility

### TWWarehouse Reports:

Inventory by Zone  
Location/Quantity by Part
